

The background of the slide features a large, white wind turbine on the right side, set against a clear blue sky with some light clouds. In the foreground, there are rows of blue solar panels, viewed from a low angle, creating a strong sense of perspective. The overall theme is clean, renewable energy.

Market participants feedback on the BZR

7 December 2022, MESC

Context

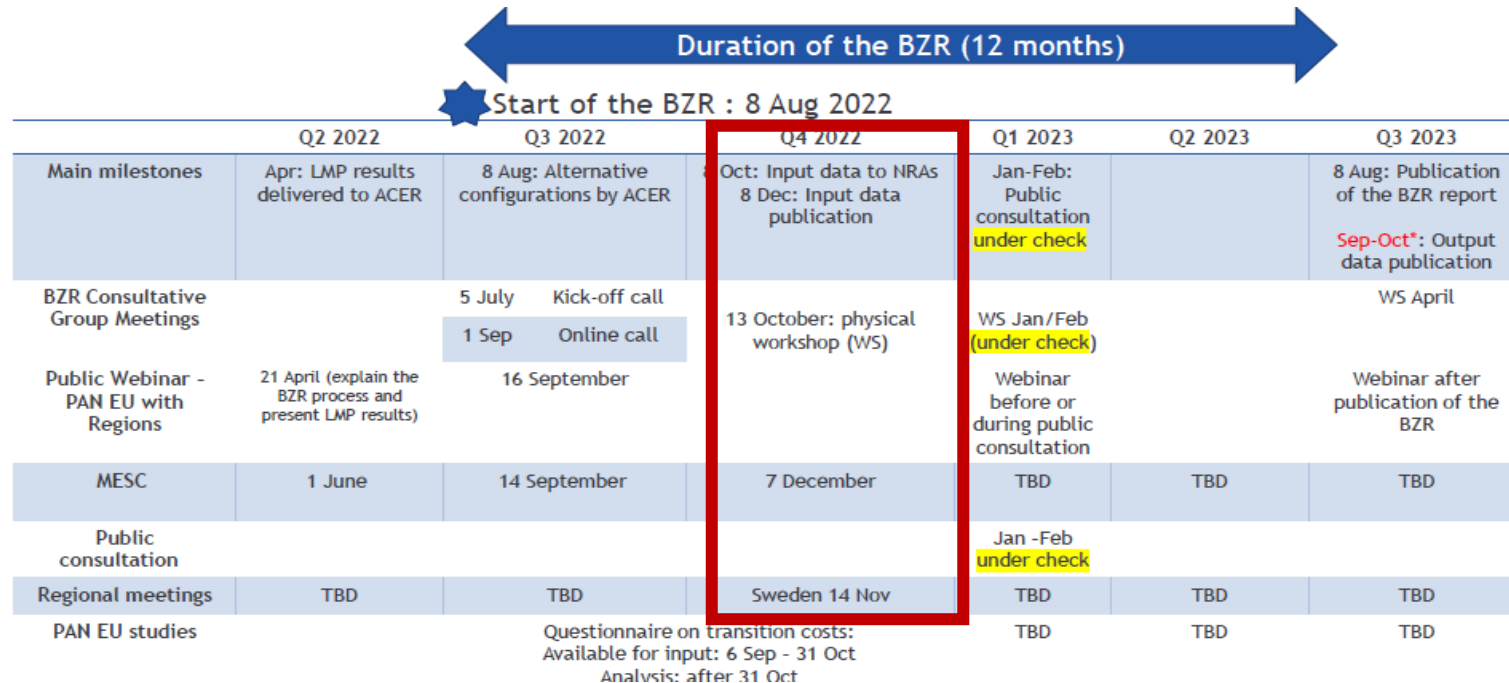

We welcomed that most of our inputs on the market liquidity study were considered by the TSOs.

Market participants struggled to provide feedback on the transition cost questionnaire.

Market participants expressed concerns at BZR meeting (13/10) about the robustness of BZR analysis after 2025 given current unprecedented market conditions.

Market participants questions

- We understand that data collection on intraday and forward markets is a challenge in the market liquidity study

How are the TSOs/consultant/ENTSO-E expert group progressing?

- Market conditions have changed drastically over the past 18 months

How are the TSOs/consultant/ENTSO-E expert adapting their scenarios?

- **How will the review fit with the broader market design reform?**
- Nodal data transparency is missing in the ENTSO-E publication (or anonymised)

How are the TSO fixing this issue on data publication?
