Remarks

As a general principle, as soon as an event occurs that prevents the normal performance of a process, the operators have to refer to the **local backup** procedures dealing with Market Coupling Results and Scheduled Exchanges Transfer.

 2.3. Final state 8

1. Introduction

This procedure sets the general principles for performing the transfer of the Market Coupling Results and resulting Scheduled Exchanges.

The different local solutions are further addressed in the related local procedures.

1.1. Summary

The procedure starts when the NEMOs or the TSOs (where appropriate) receive the Global Final Confirmation of the Market Coupling Results. Hereby, the Market Coupling Results become firm. The chain of flows is the following:

The Market Coupling Results are sent from the Verification Systems (Verification Coupling Module of the NEMO or TSOs Verification Module) to the Post-Coupling Systems (NEMO Post-Coupling Module or TSOs Post-Coupling Module).

Depending on the local solutions:

- when the Market Coupling Results are received in the NEMO Post-Coupling Module, then the relevant NEMO forwards them, along with the Global Final confirmation, to the TSOs Post-Coupling Module.
- the TSOs Post-Coupling Module, based on the Market Coupling Results, calculate the Scheduled Exchanges for the relevant Bidding Zones.

The Post-Coupling Systems (NEMO Post-Coupling Module or TSOs Post-Coupling Module) dispatch the Market Coupling Results to the Cross-NEMO Clearing and Settlement Systems and to the Congestion Income Distribution Systems (CIDS).

The local NEMO IT Systems sends the Market Coupling Results to the CIDS as a last step in this procedure.

The procedure is complete when the Scheduled Exchanges are received by the Cross-NEMO clearing and settlement systems and the CIDS, and when the Market Coupling Results are received by the CIDS.

1.2. Governed / Regulated by

- Day-Ahead Operations Agreement (DAOA)

1.4. Pre-requisites – Associated procedures

Preceding procedures:

- SDAC_NOR_02: Final Confirmation of the Results
- ANDOA_NOR_06: Preliminary Confirmation of the Results
- ANDOA_NOR_07: Final Confirmation of the Results

Subsequent procedures:

- SDAC_NOR_04: Trading Confirmation and Scheduled Exchanges Notification

Other associated procedures and rules:

- Local procedures on Scheduled Exchanges Calculation

2. Procedure

2.1. Preconditions to start

The precondition for starting this process is the successful reception of the Global Final Confirmation by all the parties that performed the Final Confirmation process of the Market Coupling Results, [REDACTED].

Remark: The confirmation of the Market Coupling Results only concerns the Net Positions per Bidding Zone and the Scheduled Exchanges against the Cross-zonal Capacities and optional Allocation Constraints (no confirmation of the prices will be performed by the TSOs or other parties entitled by the TSOs to confirm the Market Coupling Results).

2.1. General overview

The table below lists the SDAC Generic [redacted] processes related to the Market Coupling Results and Scheduled Exchanges Transfer.

Remark: Please note that the grey lines are not included in this procedure. These are inputs or outputs that help to understand this procedure.
