

Start of operational participation of Transelectrica in IGCC

The International Grid Control Cooperation or 'IGCC' was first established in 2011 to avoid counter-acting activations of aFRR balancing energy through the process known as imbalance netting. The establishment of a common European platform for operating the imbalance netting process has been officially achieved by the legal deadline of 24th June 2021, following the successful completion of all requirements as defined in the guideline on electricity balancing ([EB Regulation](#) Art. 22).

The cooperation has grown and currently counts twenty-seven members, of which twenty TSOs already performing the imbalance netting process in a coordinated manner. The operational TSOs are: 50Hertz (DE), ADMIE (GR), APG (AT), Amprion (DE), CEPS (CZ), Eles (SI), Elia (BE), Energinet (DK), HOPS (HR), Mavir (HU), PSE (PL), REE (ES), REN (PT), RTE (FR), SEPS (SK), Swissgrid (CH), TenneT (DE), TenneT (NL), Terna (IT) and TransnetBW (DE).

IGCC continues working towards meeting the requirements of the guideline on electricity balancing (EB Regulation) by facilitating the accession of the remaining continental European TSOs, to further increase efficiency and operational security in the European power system.

ENTSO-E and IGCC are pleased to announce that a milestone towards the fulfilment of this goal has been reached on **17 December 2021**, with the **start of operational participation of the TSO from Romania, Transelectrica, in IGCC**.

A high-level planning of the future start of operational participation of TSOs to IGCC is available in the [IGCC website](#).
